RE: Rublev Colours Artist Colors

The US Department of Transportation (DOT) defines “flammable liquids” as those with a flash point of 140 °F (60 °C). Rublev Colours Artist Colors are based on vegetable oil with a flash point of 450 °F (232 °C) or higher, hence **THEY ARE NONFLAMMABLE** and are not regulated by the Federal Aviation Administration (FAA) and may be carried in checked baggage.

Vegetable oil-based colors are not considered “Dangerous Goods” as classified in the International Air Transport Association’s (IATA) Dangerous Goods Regulations. They are not flammable (as described in Class 3 or Class 4 criteria), poisonous or corrosive, nor do they fall within any other class description of “Dangerous Goods”. A UN number does not apply to these materials because such numbers are assigned only to “Dangerous Goods” by the United Nations Committee of Experts on the Transport of Dangerous Goods.

Sincerely,

George O'Hanlon
Technical Director
